Observatoire volcanologique et sismologique de Martinique

Activity of Mount Pelée

Saint-Pierre, December 22, 2023 12:30 local time (GMT-4)

Volcanic activity remains low with **no volcanic earthquake** observed this week.

Between December 15, 2023 at 16:00 (UTC) and December 22, 2023 at 16:00 (UTC), the OVSM recorded no earthquake of volcanic origin.

Superficial volcano-tectonic seismicity is associated with micro-fracturing in the volcanic edifice related to the overall reactivation of the volcano observed since late 2018.

No earthquake was felt by the population.

The week before, the OVSM had recorded 1 earthquake of volcanic origin. As of December 22 and during the last 4 weeks, the OVSM recorded a total of 6 volcanic earthquakes, an average of 1 to 2 volcanic earthquakes per week.

During phases of volcanic unrest on volcanoes similar to Mount Pelée, it is usual to observe seismic activity that varies over time in intensity and frequency.

For more details on longer-term observations and interpretations of volcanic activity, please refer to the monthly bulletins of the OVSM.

The alert level is currently YELLOW: vigilance.

The Director's office of OVSM-IPGP.
