## RESEARCH STATEMENT

Geophysicist with experience in applying seismology and geodesy techniques to study crustal deformation processes caused by geological hazards, including earthquakes in subduction zones and active fault systems, volcanic activity, and landslides. My research also bridges into engineering seismology, focusing on strong ground motion simulation and seismic hazard assessment. These multidisciplinary interests have allowed me to collaborate with leading researchers in France, Italy, Japan, and the United States, strengthening my network and enriching my research perspective. Over the past five years, I have contributed to 10 peer-reviewed articles (h-index 5, WoS citations: 241) and presented over 30 times at national and international conferences. In addition, I have 9 years of university teaching experience, I have mentored students, led geophysical measurement campaigns, and supported knowledge transfer through outreach programs tailored for university students, schoolchildren, and the broader public.
