

Weekly report

Institut de physique du globe de Paris

Observatoire volcanologique et sismologique de Martinique

Activity of Mount Pelée

Saint-Pierre, August 8, 2025, 16:00 local time (GMT-4)

The volcanic activity this week was characterized by **168 volcanic earthquakes** observed.

Between August 1st, 2025 at 16:00 (UTC) and August 8, 2025 at 16:00 (UTC), the OVSM has recorded:

- **166** low-energy **volcano-tectonic** type earthquakes. These earthquakes were clearly identified as originating from one of the well-known seismically active zones on Mount Pelée, located between 1.0 and 1.4 km below the summit of the volcano. Superficial volcano-tectonic seismicity is associated with micro-fracturing in the volcanic edifice related to the overall reactivation of the volcano observed since late 2018.
- **2 shallow hybrid** type earthquakes with magnitudes $M_d = 1.05$ and $M_d = 1.1$ located approximately 1 km below the domes of Mount Pelée. Hybrid seismic signals are enriched in low frequencies and are associated with the presence of fluids (gas, hydrothermal fluids) in the volcanic edifice.

No earthquake was felt by the population.

The week before, the OVSM had recorded **275 earthquakes** of volcanic origin. As of August 8, and during the last 4 weeks, the OVSM recorded a total of 593 volcanic earthquakes, and an average of **148 to 149 volcanic earthquakes** per week.

During phases of volcanic unrest on volcanoes similar to Mount Pelée, it is usual to observe seismic activity that varies over time in intensity and frequency.

For more details on longer-term observations and interpretations of volcanic activity, please refer to the monthly bulletins of the OVSM.

The alert level is currently YELLOW: vigilance.

The Director's office of OVSM-IPGP.

Informations

The data in this report are preliminary and subject to change depending on their subsequent analysis.

The reports of OVSM-IPGP, including detailed monthly bulletins, are available at <https://www.ipgp.fr/observation/ovs/ovsm/>.

You can also find us on our [Bluesky](#) et [Facebook](#) accounts. Locations of volcano-tectonic and tectonic earthquakes

determined by the OVSM-IPGP are available in real-time at <https://renass.unistra.fr/fr/zones/les-antilles/>.
