Observatoire volcanologique et sismologique de Martinique

Activity of Mount Pelée

Saint-Pierre, December 19, 2025, 14:30 local time (GMT-4)

Volcanic activity has slightly increased this week with **60 volcanic earthquakes** observed.

Between December 12, 2025 at 16:00 (UTC) and December 19, 2025 at 16:00 (UTC), the OVSM has recorded:

- **60 shallow volcano-tectonic** type earthquakes. Among them, 4 have a magnitude (duration magnitude M_d or local magnitude M_{lv}) higher than 0.5. The largest has a magnitude **$M_{lv} = 1.0$** . The others are of lower energy. These earthquakes originate from well-known seismically active zones at Mount Pelée, located between 1.0 and 1.4 km below the summit of the volcano. Superficial volcano-tectonic seismicity is associated with micro-fracturing in the volcanic edifice related to the overall reactivation of the volcano observed since 2019.

No earthquake was felt by the population.

The week before, the OVSM had recorded **19 earthquakes** of volcanic origin. As of December 19, and during the last 4 weeks, the OVSM recorded a total of 124 volcanic earthquakes, and an average of **31 volcanic earthquakes** per week.

During phases of volcanic unrest on volcanoes similar to Mount Pelée, it is usual to observe seismic activity variable in intensity and frequency. The probability of eruptive activity in the short term remains low. However, given all the observations collected since the end of 2018 and their nature, and based on the recent observations of the OVSM-IPGP, we cannot exclude a medium-term evolution of the situation (weeks, months).

For more details on longer-term observations and interpretations of volcanic activity, please refer to the monthly bulletins of the OVSM.

The alert level, in accordance with the provisions planned by the authorities, is currently YELLOW: vigilance

The Director's office of OVSM-IPGP.

Informations

The data in this report are preliminary and subject to change depending on their subsequent analysis.

The reports of OVSM-IPGP, including detailed monthly bulletins, are available at <https://www.ipgp.fr/observation/ovs/ovsm/>.
