Institut de physique du globe de Paris

Observatoire volcanologique et sismologique de Martinique

Activity of Mount Pelée

Saint-Pierre, June 12, 2026, 15:30 local time (GMT-4)

Between June 5, 2026 at 16:00 (UTC) and June 12, 2026 at 16:00 (UTC), the OVSM has recorded **108 volcanic earthquakes**:

- **108 volcano-tectonic** type earthquakes. Among them, 10 have a magnitude (local magnitude M_{lv} or duration magnitude M_d) higher than 0.5 and 5 have a magnitude higher than 1. The largest one has a magnitude $M_{lv} = 1.72$. The others are of lower energy. The vast majority of these earthquakes are located at depths between 0.8 and 1.4 km below the summit of the volcano. However, 1 earthquake has been preliminarily located at a depth of about 8 km below sea level to the north of Mount Pelée. Volcano-tectonic seismicity is associated with micro-fracturing in the volcanic edifice related to the overall reactivation of the volcano observed since 2019.

No earthquake was felt by the population.

The week before, the OVSM had recorded 138 earthquakes of volcanic origin. As of June 12, and during the last 4 weeks, the OVSM recorded a total of 358 volcanic earthquakes, and an average of **89 to 90 volcanic earthquakes** per week.

During phases of volcanic unrest on volcanoes similar to Mount Pelée, it is usual to observe seismic activity variable in intensity and frequency. The probability of eruptive activity in the short term remains low. However, considering the observations accumulated over the past several years, particularly in recent months, an evolution of the situation in the medium term (weeks to months) cannot be excluded.

For more details on longer-term observations and interpretations of volcanic activity, please refer to the monthly bulletins of the OVSM. The alert level, in accordance with the provisions planned by the authorities, is currently **YELLOW: vigilance**

The Director's office of OVSM-IPGP.

Informations

The data in this report are preliminary and subject to change depending on their subsequent analysis.

The reports of OVSM-IPGP, including detailed monthly bulletins, are available at <https://www.ipgp.fr/observation/ovs/ovsm/>.

You can also find us on our [Bluesky](#) et [Facebook](#) accounts. Locations of volcano-tectonic and tectonic earthquakes

determined by the OVSM-IPGP are available in real-time at <https://renass.unistra.fr/fr/zones/les-antilles/>.
