Observatoire volcanologique et sismologique de Martinique

Activity of Mount Pelée

Saint-Pierre, September 11, 2026, 17:00 local time (GMT-4)

Volcanic seismic activity

Between September 4, 2026 at 16:00 (UTC) and September 11, 2026 at 16:00 (UTC), the OVSM has recorded **159** volcanic earthquakes:

- **151 volcano-tectonic** type earthquakes. 4 have a magnitude (local magnitude M_{lv} or duration magnitude M_d) higher than 1. The largest one has a magnitude **$M_{lv} = 1.95$** . The others are of lower energy. These earthquakes are located at depths between 0.6 and 1.3 km below the summit of the volcano.
- **7 shallow hybrid** type and **1 shallow long-period** type earthquakes. The long-period event has a magnitude $M_{lv} = 1.0$. The others are of lower energy. These earthquakes are located around 1 km beneath the summit of the volcano.

No earthquake was felt by the population.

The week before, the OVSM had recorded 185 earthquakes of volcanic origin. As of September 11, and during the last 4 weeks, the OVSM recorded a total of 532 volcanic earthquakes, corresponding to an average of **133 volcanic earthquakes** per week.

Deformation at Mont Pelée

Since May 2026, the OVSM has recorded multi-centimeters ground displacements in the summit area of Mont Pelée. Over the past four weeks, the maximum extension rates are on the order of **0.8 cm per month**, similar to the previous month. These displacements are consistent with deformation of the volcanic edifice induced by an inflating pressure source located at a depth of approximately 1 km beneath the summit.

The probability of eruptive activity in the short term remains low. However, considering the observations accumulated over the past months and years, an evolution of the situation in the medium term (weeks to months) cannot be excluded.

The alert level, in accordance with the provisions planned by the authorities, is currently **YELLOW: vigilance**.

For more details on longer-term observations and interpretations of volcanic activity, please refer to the monthly bulletins of the OVSM.

The Director's office of OVSM-IPGP

Informations

The data in this report are preliminary and subject to change depending on their subsequent analysis.

The reports of OVSM-IPGP, including detailed monthly bulletins, are available at <https://www.ipgp.fr/observation/ovs/ovsm/>. You can also find us on our [Bluesky](#) et [Facebook](#) accounts. Locations of volcano-tectonic and tectonic earthquakes determined by the OVSM-IPGP are available in real-time at <https://renass.unistra.fr/fr/zones/les-antilles/>.
