## Taurus Release 1.01.06 Notes

**Release Importance:**

Priority 1. Important Update. Strongly Recommended - Perform As Soon As Possible. Update affects data availability in Taurus store.

**Software Improvements:**

- Improved timing system performance over wide temperature range
- Eliminated small data gaps caused when operating Taurus in Buffered mode and GPS in automatic mode.
- Power management and improvements to low-level watchdog performance
- Improved NP to NMXP (NAQS) re-transmission operation reducing time to complete re-tx requests.

**New Features:**

No new features. Maintenance Release only

**Known Issues:**

This release contains the following operational behaviors or minor bugs planned to be addressed in future maintenance releases.

| Issue | Description and Workaround |
|---|---|
| Switch to Buffered Mode | When changing the Taurus from Communications mode to Buffered mode, the Taurus stays in Communications Mode.<br><br>Workaround: On shutdown page, select "Turn-Off Display" to ensure units switches to Buffered Mode |
| Time-series Download | Occasionally attempting to download time-series data results in "The Store is Closed" message.<br><br>Workaround: Close external browser and re-open. |
| Status Page – No Data Available Message | "No Data Available" showing on the Current status page, while data is updated on the Waveform and Sensor pages.<br><br>Workaround: Close the external browser and re-open. |
