Chapter 1

Linux Utilities v1.10	1
1.1 Description	1
1.2 Installation	1
1.3 Operation	1

Chapter 2

Solaris Utilities v1.10	3
2.1 Description	3
2.2 Installation	3
2.3 Operation	4

General Utilities for CTBTO Linux workstations is a set of simple scripts for system administration.

1.1 Description

Table 1-1 Linux scripts

Script	Description
<code>set_primary</code>	Set the workstation to be a Primary Station: It sets up the system so that it will run NmxToCD1(1) on startup, and starts it if it is not currently running.
<code>set_auxiliary</code>	Set the workstation to be an Auxiliary (or backup) Station: It sets up the system so that it will not run NmxToCD1(1) on startup. If NmxToCD1(1) is currently running, it will stop it.
<code>nmxrun</code>	Called upon system bootup and defines which of the Nanometrics software is started automatically. This script must exist in the <code>/nmx/bin</code> directory.
<code>nmxrun_primary</code>	This script is a replacement script for <code>nmxrun</code> , used by <code>set_primary</code> .
<code>nmxrun_auxiliary</code>	This script is a replacement script for <code>nmxrun</code> , used by <code>set_auxiliary</code> .
<code>nmxcron</code>	Defines scheduled tasks to be run for Nanometrics. These can include removing old log files so that the hard drive does not fill up.
<code>nmxwatchdog</code>	Script to start/stop Nanometrics programs on boot/shutdown.
<code>.runnmxapp</code>	Script to start/stop a Nanometrics program.

1.2 Installation

- ▶ See the installation instructions for the acquisition system workstation.

1.3 Operation

Only `set_primary` and `set_auxiliary` should be called directly.

- ▶ To call, enter the command at a command prompt on the terminal or through tel-net:
 > `set_primary`
 or

```
> set_auxiliary
```

General Utilities for CTBTO Solaris workstations is a set of simple scripts for system administration.

2.1 Description

Table 2-1 Solaris scripts

Script	Description
<code>set_primary</code>	Set the workstation to be a Primary Station: It sets up the system so that it will run NmxCtoCD1(1) on startup, and starts it if it is not currently running.
<code>set_auxiliary</code>	Set the workstation to be an Auxiliary (or backup) Station: It sets up the system so that it will not run NmxCtoCD1(1) on startup. If NmxCtoCD1(1) is currently running, it will stop it.
<code>nmxcrun</code>	Called upon system bootup and defines which of the Nanometrics software is started automatically. This script must exist in the <code>/nmxc/bin</code> directory.
<code>nmxcrun_primary</code>	This script is a replacement script for <code>nmxcrun</code> , used by <code>set_primary</code> .
<code>nmxcrun_auxiliary</code>	This script is a replacement script for <code>nmxcrun</code> , used by <code>set_auxiliary</code> .
<code>S02CHECKFSYS</code>	Run at system bootup. Checks the file system for errors under the assumption that the system was shutdown ungracefully (for example, due to a power outage).
<code>S95nmxc</code>	Script to start/stop Nanometrics programs on boot/shutdown. Identical to <code>K05nmxc</code> . Exists in <code>/etc/rc3.d</code> .
<code>K05nmxc</code>	Script to start/stop Nanometrics programs on boot/shutdown. Identical to <code>S95nmxc</code> . Exists in <code>/etc/rc0.d</code> and <code>/etc/rc2.d</code> .
<code>nmxcron</code>	Defines scheduled tasks to be run for Nanometrics. These can include removing old log files so that the hard drive does not fill up.

2.2 Installation

- ▶ See the installation instructions for the acquisition system workstation.

2.3 Operation

Only `set_primary` and `set_auxiliary` should be called directly.

- ▶ To call, enter the command at a command prompt on the terminal or through telnet:
 - > `set_primary`
 - or
 - > `set_auxiliary`
